

InsightLoop Readiness Assessment

A readiness assessment evaluates your service data quality and facilitates interaction with our customized solution. Our experienced team advises on best practices and helps define your AI implementation strategy.

Sample Data (est. 4 hours)

Identifying two or three equipments and provide sample data (past service cases, support manuals), which we'll load into the InsightLoop Engine.

Results & Action Plan (est. 1 - 3 days)

Reviewing the quality of your existing service data. Our team offers experience-based suggestions and provides a tailored proposal and rollout plan.

Kick-off (est. 1 - 3 hours)

Providing us with an overview of your existing service processes, challenges, and future objectives.

System Configuration (est. 2 days)

Loading the sample data into our system and make it available to your early testers. Weekly feedback sessions with you and our data experts help us quickly iterate on necessary adjustments.

Our process is designed to be swift and straightforward, maximizing benefits and reducing disruptions to ongoing initiatives.
